INTRODUCTION

A growing number of medicines are based on biological molecules such as proteins and monoclonal antibodies. These novel drugs have resulted in new, more effective treatments for a number of serious conditions. Yet sometimes these medicines trigger a response from the patient's immune system, which can decrease the effectiveness of the drug or cause severe side effects.

The aim of the IMI-founded ABIRISK project "**Anti-Biopharmaceutical Immunization: Prediction and Analysis of Clinical Reactions to Minimize the Risk**", is to shed new light on the factors behind this immune response. The project, which represents the first concerted effort to solve this problem, officially kicked off March 1st, 2012. ABIRISK project will aid in the creation of new, safer **biopharmaceuticals (BPs)** and also generate tools to determine how individual patients are likely to respond to them both in clinical trials and after release to the market.

The ABIRISK consortium (presently made up of thirty-five partners, twenty-four of which are academic institutions, nine are EFPIA member companies and two are small and medium enterprises, with thirteen countries represented), has been designed to meet all of these requirements in order to target three types of disorders: **Hemophilia A, Multiple sclerosis and Inflammatory diseases: inflammatory rheumatisms (including rheumatoid arthritis) and inflammatory bowel diseases.**

ABIRISK Project will collect data both retrospectively from patients suffering from various types of diseases and treated with various BPs at European centers with a high level of experience in clinical research and will prospectively recruit additional patients in dedicated studies during the 5 years of this program. Guidelines and Standard Operating Protocols for the study of anti-drug immunization will be established and used to standardize the collection of prospective data from these patients.

ABIRISK Project thus represents a unique opportunity to create an interdisciplinary task force of clinical centers especially designed to study immune responses against biopharmaceuticals.

WELCOME

Dear Reader,

We would like to welcome you to the October 2015 **ABIRISK Scientific Newsletter**. The Scientific Newsletter gives you a monthly update on the most relevant literature related to ABIRISK topics published around the globe, both inside and outside ABIRISK consortium.

From now on, we will draw your attention to a selection of articles each month that we think make a difference in their respective fields.

In addition, you will find in this issue some regulatory news on biopharmaceuticals

We look forward to your visit on **ABIRISK** website for more information and updates on the program.

Enjoy reading !

Best wishes

The ABIRISK management team

LITERATURE

This month's selected articles

1. This study from colleagues of ABIRISK highlights the risk of immunogenicity resulting from the unwanted targeting of a therapeutic antibody to human dendritic cells

[Contribution of enhanced engagement of antigen presentation machinery to the clinical immunogenicity of a human IL21 receptor-blocking therapeutic antibody.](#)

Xue L, Hickling T, Song R, Nowak J, Rup B.

Clin Exp Immunol. 2015 Sep 24.

2. A special issue addressing the question of extrapolation of immunogenicity from 1 compound to its biosimilars

[The immunogenicity of biosimilar infliximab: can we extrapolate the data across indications?](#)

Ben-Horin S, Heap GA, Ahmad T, Kim H, Kwon T, Chowers Y.

Expert Rev Gastroenterol Hepatol. 2015 Sep;9 Suppl 1:27-34.

Immunogenicity

[Characterisation of a Novel Anti-CD52 Antibody with Improved Efficacy and Reduced Immunogenicity.](#)

Holgate RG, Weldon R, Jones TD, Baker MP.
PLoS One. 2015 Sep 15;10(9):e0138123.

[Contribution of enhanced engagement of antigen presentation machinery to the clinical immunogenicity of a human IL21 receptor-blocking therapeutic antibody.](#)

Xue L, Hickling T, Song R, Nowak J, Rup B.
Clin Exp Immunol. 2015 Sep 24.

Methods

[Identification of suitable reference genes for peripheral blood mononuclear cell subset studies in multiple sclerosis.](#)

Oturai DB, Søndergaard HB, Børnsen L, Sellebjerg F, Christensen JR.
Scand J Immunol. 2015 Sep 23.

[Remediating agitation-induced antibody aggregation by eradicating exposed hydrophobic motifs.](#)

Clark RH, Latypov RF, De Imus C, Carter J, Wilson Z, Manchulenko K, Brown ME, Ketcham RR.
MAbs. 2014;6(6):1540-50.

[Role of benzyl alcohol in the unfolding and aggregation of interferon \$\alpha\$ -2a.](#)

Bis RL, Singh SM, Cabello-Villegas J, Mallela KM.
J Pharm Sci. 2015 Feb;104(2):407-15.

[Quantitative measurement of the target-mediated internalization kinetics of biopharmaceuticals.](#)

Vainshtein I, Roskos LK, Cheng J, Sleeman MA, Wang B, Liang M.
Pharm Res. 2015 Jan;32(1):286-99.

Biosimilars

Comparison of immunogenicity test methods used in clinical studies of infliximab and its biosimilar (CT-P13).

Kim JS, Kim SH, Kwon B, Hong S.

Expert Rev Clin Immunol. 2015 Sep;11 Suppl 1:33-41.

Comparison of the pharmacokinetics and safety of three formulations of infliximab (CT-P13, EU-approved reference infliximab and the US-licensed reference infliximab) in healthy subjects: a randomized, double-blind, three-arm, parallel-group, single-dose, Phase I study.

Park W, Lee SJ, Yun J, Yoo DH.

Expert Rev Clin Immunol. 2015 Sep;11 Suppl 1:25-31.

Biosimilar monoclonal antibodies: the scientific basis for extrapolation.

Schellekens H, Lietzan E, Faccin F, Venema J.

Expert Opin Biol Ther. 2015 Nov;15(11):1633-46
